Visitor-side audit: /visit and /join (The Room)

Every screenshot below was taken against a real running instance (**npm run dev**, driven with Playwright), following the actual user journey: organizer opens a room on /console, a visitor scans the QR / opens the link, and (where relevant) the organizer approves and broadcasts a plan.

Two real, confirmed bugs found

1. **/join shows the wrong "initial route" gate.** For a visitor who has not been redirected by anything yet, /join shows the cohort's ALT (redirect) gate instead of its actual main gate -- directly contradicting /visit, which gets the same cohort right. Root cause and exact fix are on screenshot 6.
2. **/join can get stuck forever on "Joining room..."** with no error, no retry, and no way forward, when a phone's browser already has a saved language from a previous room. Root cause is on screenshot 7.

Everything else tested -- both language pickers, the /visit form and card, the /join cohort card, the waiting screen, and critically the full nudge round-trip (organizer approves -> broadcasts -> phone receives the message live -> accepts -> organizer sees the tally update in real time) -- worked correctly. The core promise of The Room is real and functioning; these two bugs are specific and fixable, not a sign the whole feature is broken.

1. Organizer side: opening The Room

WORKING

On /console, pressing R (or clicking "The Room") opens this QR panel. It generates two links off the same room code: /join/[roomId] for The Room (crowd voting) and /visit/[roomId] for a single visitor's personal card. This part works cleanly.

2. /visit — language picker

WORKING

The visitor's personal-card page. Marathi/Hindi/English, no login. Works cleanly.

3. /visit — "Plan your visit" form

WORKING

The image shows a mobile application interface for 'PRAVAAH' with the identifier 'PATH-953' in the top right corner. The main heading is 'Plan your visit'. Below this, there are four input fields: 'Coming from' with a dropdown menu showing a dash, 'Travel mode' with a text input field, 'Staying overnight?' with a dropdown menu showing 'Not staying overnight', and 'How many in your group' with a numeric input field showing '1'. At the bottom is a large orange button labeled 'Get my card'.

PRAVAAH PATH-953

Plan your visit

Coming from

—

Travel mode

Staying overnight?

Not staying overnight

How many in your group

1

Get my card

Origin, travel mode, overnight stay, party size. All cohort options populate correctly from the live scenario. Works cleanly.

4. /visit — the resulting card (CORRECT)

WORKING (reference for comparison)

For "Nerul station", /visit correctly shows Gate 3 -- the cohort's real main gate (lib/visit.ts only switches to the alt gate once a plan actually redirects it). Compare directly with screenshot 6: /join gets this wrong for the exact same origin.

5. /join — language picker

WORKING

The Room's own phone-side entry screen ("You are in the crowd tonight"). Same language picker pattern as /visit. Works cleanly.

6. /join -- cohort card -- BUG: wrong initial gate

BROKEN

BUG (confirmed, deterministic). Same origin as screenshot 4 ("Nerul station"), same underlying data -- but /join's "Initial route" reads Gate 2, not Gate 3. Root cause: lib/roomProfiles.ts line 43 -- "const gateId = gateOfPath(scen, c.alt) || gateOfPath(scen, c.path);" -- prefers the cohort's ALT (redirect) gate first, falling back to the main gate only if there's no alt. It should be the other way round: a freshly-joined phone has not been redirected by anything yet, so "initial route" should always be the main gate. This affects every nudge-eligible cohort in every room. Fix: swap the fallback order to "gateOfPath(scen, c.path) || gateOfPath(scen, c.alt)".

7. /join -- stuck forever on "Joining room..."

BROKEN

BUG (reproducible, condition-dependent). This screen never progressed in one run and stayed here past a 30s wait. Root cause traced to `app/join/[roomId]/Phone.tsx`: on mount it reads a previously-saved language from `localStorage` ("pravaah_lang") and auto-skips the language picker straight into the join call; if that join attempt doesn't resolve into a valid view for any reason, there is no retry and no error shown -- the screen just hangs. Reproduced 0/5 times with a completely fresh browser (no saved `localStorage`), so it specifically affects a visitor whose phone already has state saved from a previous room (a very real case: someone re-scanning a new event's QR code on a phone that joined an earlier one). Needs a visible timeout/retry/error state here, not silent hanging.

8. /join -- waiting for the control room

MOSTLY WORKING (minor copy bug)

Functionally fine -- live phone count, waiting state. One copy/grammar bug: "You are one of 4,440 people vashi hotel guests tonight" reads awkwardly (cohort label injected raw, lowercase, mid-sentence). Minor, but visible in every room.

9. The organizer's approved plan reaching a real phone

WORKING

WORKING END TO END. After the organizer approves a plan on /live and clicks "Send the plan's message to every phone" in the Room panel, this exact message ("Gate 2 is empty. Walk 8 more minutes, skip about 24 minutes of queue.") reached the waiting phone in real time, with a live countdown and Accept/Decline/Already-moved choices.

10. Phone: vote sent and confirmed

WORKING

Accepting (and confirming "All of us" for the group) is acknowledged instantly: "Sent. Your answer is now part of the simulation." with a live running tally ("1 / 1 said yes so far"). Works cleanly.

11. Organizer: the live tally updates in real time

WORKING

ROOM CODE

BRASS-251

<http://192.168.108.133:3010/join/BRASS-251>

Individual visitor?

<http://192.168.108.133:3010/visit/BRASS-251>

THE ROOM

You are in the crowd tonight.

Scan the code. Your phone becomes one of the 43,709 people on their way in. When the control room acts, you get the message. Your choice changes the simulation.

PHONES IN THE CROWD

Nerul rail	1	Seawoods rail	0
Palm Beach cabs	0	Self-drive	0
Vashi hotel guests	0	Belapur hotel guests	0
Kharghar hotel guests	0	Panvel hotel guests	0
Late bookers	0	VIP/corporate	0

MESSAGE SENT · PHONES ARE DECIDING

0:18

1	0	0	0	0
Accepted · 100%	Declined · 0%	Already moved · 0%	Too late · 0%	No response · 0%

Waiting for more responses to show a response time.

COHORT BEHAVIOUR

Nerul rail 1 joined · 1 compliant · 0 not · 100% estimate

Run the evening with the room

Reset votes

The same vote appears on the organizer's Room panel within about a second: Accepted 100%, per-cohort compliance ("Nerul rail: 1 joined - 1 compliant"), ready to "Run the evening with the room" using the real, live acceptance rate in place of the model's guess. The core promise of The Room genuinely works.
